

GROWING AGRICULTURE

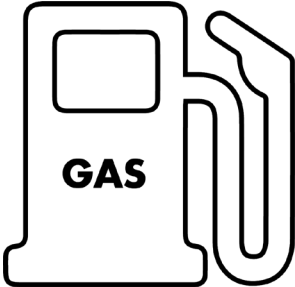

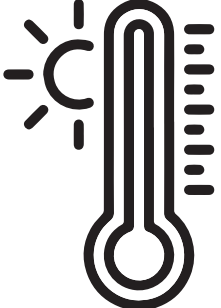

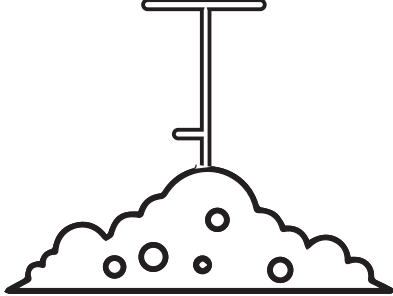

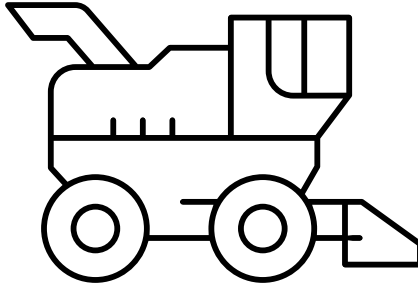

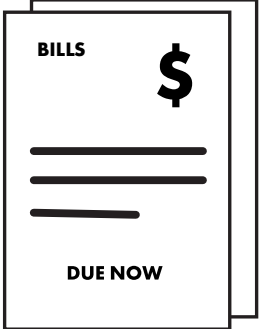

together.

Name: _____

WHAT AFFECTS YIELD?

Producers must continue to refigure their breakeven throughout the year as expenses, yield, and market prices can quickly change. Yield, the measurement of an agricultural product, is affected by Mother Nature. For example, rainfall, temperature, and soil nutrients play a big part in determining a farmer's yield. Other factors such as land, equipment expenses, fertilizer and chemical inputs, and fuel, affect a breakeven, but have nothing to do with yield.

Look at the pictures below. Use a yellow crayon to color all of the pictures that affect Yield.

 <p>Rainfall</p>	 <p>Fuel</p>	 <p>Temperature</p>
 <p>Soil Nutrients</p>	 <p>Equipment</p>	 <p>Expenses</p>
