

GROWING AGRICULTURE *together.*

PROPANE

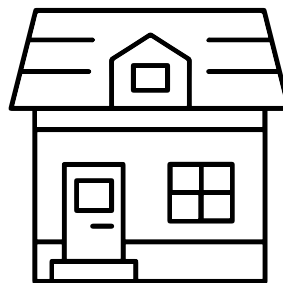

Propane gas is a natural resource, that we can collect right here in America and use for our everyday energy needs. Propane is a cool fuel because it's better for the environment than other fuels. It releases fewer bad gases into the air making it cleaner to use.

USES OF PROPANE

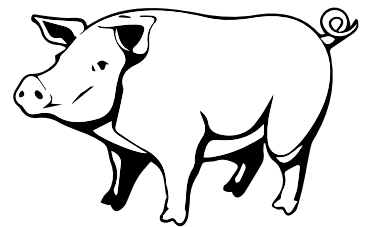

Propane can be used to power engines on the road, keep our houses warm and running, and also, keep our farms going.

IN THE HOME

Propane is used in millions of American homes for either space or water heating. It keeps houses warm and can be used to wash dishes, dry our clothes, and cook our food.

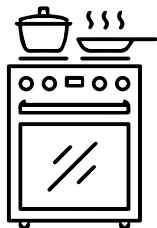

ON THE FARM

On the farm, propane is used for many things. It keeps irrigation engines running, helps dry grain, and makes barns more comfortable for our animals by keeping them warm.
